Introduction into Fortify

The most requested system is finally here, and it’s a **game-changer** for your Rust Console server: **Fortify**, the personal offline raid protection system your community’s been waiting for!

With **Fortify**, you can give your players the ability to **customize their own offline protection**, helping keep base wipes to a minimum while they’re offline—and keeping your server population healthier for longer.

□□ But here’s where it gets powerful:
As an admin, **you’re in full control**. You can **globally disable** all offline raid protection for scheduled raid events, PvP weekends, or chaos hours—whatever your server’s vibe is. Once the raid window closes, offline protection automatically reactivates, per player, without you lifting a finger.

□ Key Highlights:

- □ Personal offline protection (user-controlled)
- □□ Admin override for all protections
- □□ Timed raid windows with auto-restore
- □□ Flexible setup: guided user config or admin-only control

Keep your server balanced. Keep players invested. And keep things fair—even when they log out.
Fortify is live. Time to take your server to the next level. □□
