Setting Up 96.9 KDFM

Introduction

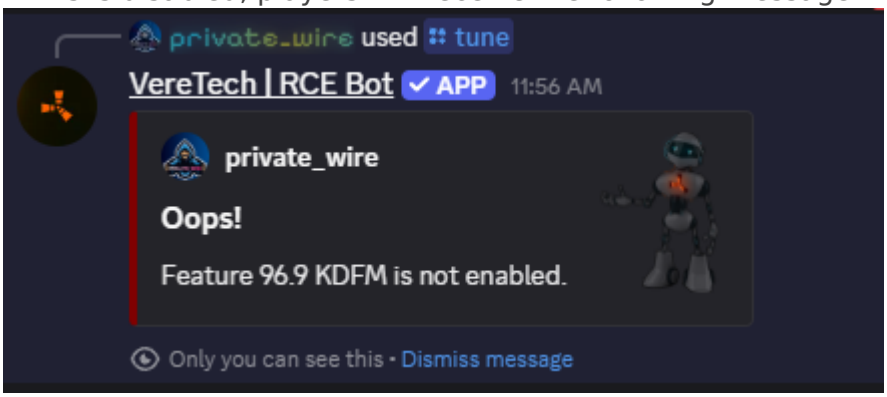

96.9 KDFM is a premium feature, designed to allow your players to subscribe to in-game frequencies and receive alerts into their Discord DM's when a frequency is triggered.

Getting Started

By using `/settings tune` in your discord and selecting the gameserver to configure, you are presented with the following options:

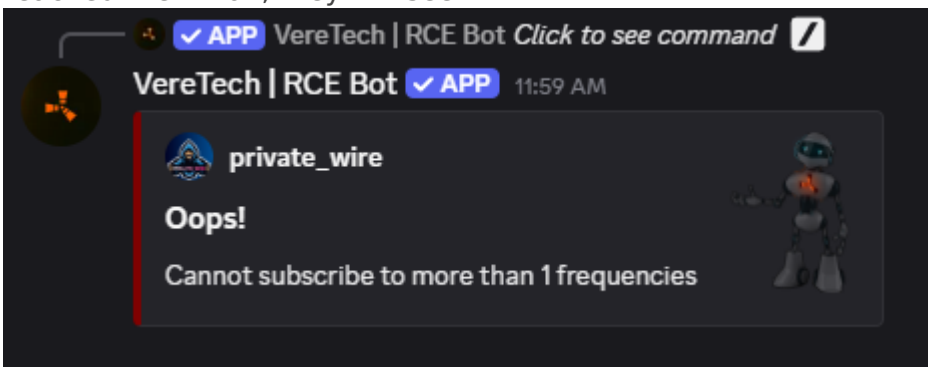

- Enabled: Turn the feature on or off for your gameserver, by default this is off.
  - If this is disabled, players will receive the following message when they try to use:

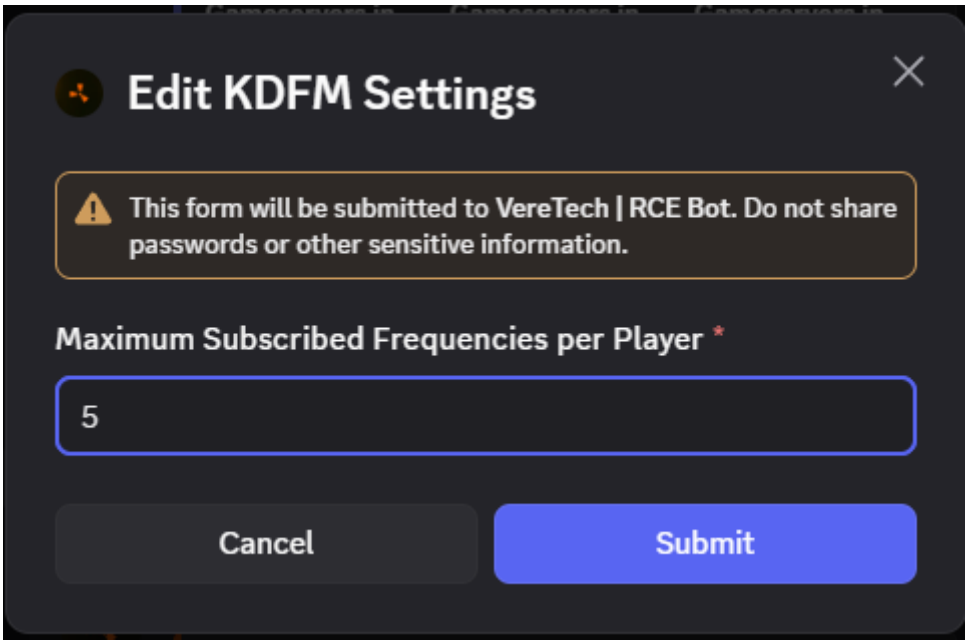

- Maximum Subscribed Frequencies per Player: Limit the number of frequencies a player can receive alerts for. By default this is 5.

- When a player tries to subscribe to a new frequency when they have already reached their max, they will see:

By clicking on "Toggle Enabled", the enabled status will toggle on or off.

By clicking on "Edit Settings", you will see the following screen to configure the max subscribed frequencies per player:
